File formats AutoCAD uses the DWG and DXF file formats to store its data, and has expanded to include a new series of standards including the DWGX, dwgmx, and dxfmx file formats. The drawings themselves are a linear series of closed loops called sections, which are subdivisions of the whole drawing. The section breaks allow you to divide the drawing up into manageable chunks. AutoCAD can import and export a variety of other file formats: Architecture Design Graphic Exchange (ADGX) file format for exporting architecture design and engineering drawings. Binary format for converting from AutoCAD to certain feature-rich DGN (.dgn) or DWG (.dwg) files, or from AutoCAD to Microsoft Excel. Excel format for importing from Microsoft Excel. XMP (eXtensible Metadata Platform) format for storing metadata. WebDAV (.dwgx) file format for exporting and hosting AutoCAD files. WebDAV (.dwg) file format for creating web-based dashboards and on-screen presentations, as well as exporting AutoCAD drawings to video-based formats. XML format for text file format. Structural files are stored in a C-style naming convention: .DWG or.dwg: The file's actual file name .DGN: The first part of the file name indicates the contents of the drawing. .DXF: Describes the file format it is saved in .ACX: Architecture/Civil/Electrical/Mechanical files are stored in a.ACX file extension and are always saved as DXF files. .HLS: The first part of the file name indicates the contents of the drawing. The rest of the file name indicates which function is drawing, i.e. "H" (household), "S" (site), etc. For example, a household drawing file would have the extension.HLS.A Naming conventions also apply for generic features and sub-menus: .A: Indicates a feature or sub-menu, not a drawing. .C: Indicates a control, not a drawing. .D: Indicates a drawing. Appendix The Appendices are added to the end of a drawing. To save a drawing, the Appendices must have been added to a1d647c40b
